

Industry-based projects Student Program

Moving People, Moving Goods, Advancing Australia.

*Promoting
collaboration
between student
researchers and
industry*

Useful research outcomes to promote innovation

Most companies recognise the importance of innovation for their long-term sustainability and growth, but often lack the resources for exploration of new ideas.

Final-year university students represent an untapped source of capability, who bring their skills, energy and enthusiasm to projects in return for experience in a professional environment.

The iMOVE CRC Industry-based Projects Student Program offers a great opportunity for organisations to explore emerging trends and techniques and to test and deploy new ideas.

Participation in the program is free and companies benefit from:

A motivated and engaged student research team

Experienced university supervisors to oversee the projects

Useful research outcomes

Funding for research team expenses (Limits apply)

The chance to evaluate up-and-coming talent

The students are passionate and self-motivated. The program allows me to achieve more than I set out to, in less time

Dennis Savic
Engineer and entrepreneur

How it works

STEP 1

iMOVE CRC works with a network of coordinators at top Australian universities to help companies identify project opportunities

STEP 2

A student or student team with suitable expertise is then allocated to the project. This typically runs from March to October

What do companies contribute?

STEP 3

Throughout the year there are progress meetings with the student researchers and company mentors and a series of events run by iMOVE CRC for feedback, review and networking

STEP 4

Students produce a thesis at the end of the year and present the final results to their industry partner

- An interesting idea, problem or question that needs investigation
- A mentor to oversee the project (we recommend that the mentor meets monthly with the students either face-to-face or on the phone)
- Enthusiasm for developing the next generation of talent
